

# HICKFORD PARADE SEWER REPLACEMENT

## Key

-  Construction site compound
-  Existing sewer line
-  Sewer replacement construction corridor
-  Temporary above-ground sewer

*Wannon Water is replacing an ageing section of the existing sewer main within the sand dunes adjacent to Hickford Parade, Warrnambool.*

*These works are essential for maintaining efficient and reliable services to Warrnambool customers and catering for future growth.*

### **Why does the sewer need to be replaced now?**

This section of the sewer is 50 years old and has reached the end of its serviceable life. It is now in urgent need of replacement to maintain reliable sewerage services and protect the environment.

While replacing the sewer, Wannon Water will also take the opportunity to increase its size to cater for future growth east of the Hopkins River.

### **When will the works take place?**

The works will begin in January 2015. Wannon Water expects the sewer replacement to be completed by April 2015.

### **Managing vegetation**

Consistent with the planning permit, some vegetation along the sewer alignment will be cleared to allow for construction works to take place. This alignment will be maintained as an access track for future maintenance purposes.

### **Beach access**

The beach access via the promenade will not be affected by these works. However, some informal access tracks may be temporarily closed.

### **Further information**
